you're asying that when someone buys compaq dos for $99, they also
get windows for free. but if you want windows alone, it cost you
$150.

and compaq wants windows for free.

am I missing something why this is good for us?

don't forget that today, retail is still 61% of windows revenue.

Is this the approach you want to take? Or would you prefer a simple check and refuse to run? Thats a lot easier but clearly quite defeatable. I'll come and talk to you about it.

we cannot have compaq sell Win+DOS product that is cheaper than what
we sell windows alone for. even if it's works just on compaq
machines. we thus tell the market that we are dramatically
overcharging for windows. and our retail business goes down the
tubes. if they want to offer their dos, which includes windows, for
$200, then we're talking.

yes, I want the compaq business but not to give to them for nothing
and kill my retail business, too.

they realize they are falling behind and they have to do something
to fix it.

ok they are yours.

the winlogin schedule has always been dec-jan. should finish dec but
if it stretches into jan, you shouldn't count on them jan 1.
