~ PS/2 55sz. 4 megs, VGA, DM386, Smartdrive, 30 meg HD with
   stacker 2.0.
~ Dell 486/33e, with QEMM 6.02
~ Gateway 486/33, EISA. SuperVGA doesn't work and the drivers
   that came with it don't. They didn't know the brand.
~ Reply 486 microchannel
~ IBM PS/2 Model 70, no problems.

Setup has detected that the operating system software
running on this machine is not MS-DOS. Microsoft Windows was
designed to run with MS-DOS versions 3.1 and higher. Windows
is tested running on MS-DOS on a vast variety of machine and
peripheral configurations (see system requirements and hardware
compatibility list for details). Running Microsoft Windows on
an operating system other than MS-DOS could cause defective and
or unpredictable performance and is at the customer's sole risk."

Brad, FYI I wanted to make sure you had it on your calendar that Matt
Griffin and Rod Brooks from EggHead will be here on Thurs Jan 23 at
3:30 for winball presentation and demo. I assume that SteveB is still
planning to host. I wasn't sure if you knew about it.

i knew he was coming in next week, wasnt' sure when. yes, sharon
should put on my calendar.

John and Eric and I are working on the demo. I think that its
important to get the spin right for the presentation (I assume I'm
going to do some slides, not Steve).
