I think we should decide whther we will teat our win apps on os/2
or not and if so or not decide whether to put up a message
that appears when you load the app on OS/2 that syas this may not work
exactly right or it does or oit does but slwoly
lets cover our PSs exposure take a small shot at os/2 and tell
customers that we do test the apps on os/2 even if they
do not work well/perfectly
