My opinion is that we should keep the technology we have developed under
extremely tight control. In any event, the decision to use this technology
in ANYTHING that Microsoft ships is a BIIIG decision. I am somewhat inclined
to answer this question with: "Sorry, we can't help you." I also note
that they want to differentiate MS-DOS and PC-DOS. We have no technology
to do that. PC-DOS ***))) is <<<*** MS-DOS. Someone needs to inform the
rest of the folks around here about this fact so that we stop getting such
requests and stop playing a part in encouraging such thinking.

   MS Brazil have done a DOS keyboard driver for the IBM Brazillian layout
   (105 keys!) and have asked us if there is any way to check if it is
   running on MS-DOS, PC-DOS, DR-DOS or other. They want it to run ONLY on
   MS-DOS. Can anyone help?

Hi Andy - Can you arrange for a beta release of the 3.1 SDK to be
sent to Jim Ratti as per Brad's request? If you have any questions,
please let me know.

Thanks,
Tim Brewer

can you please send a 3.1 sdk to :

        Jim Ratti
        U.S. Air Force (project Speckled Trout)
        M/S 101
        Det 1, 4950th Test Wing
        Andrews AFB, DC 20331-5000
        (301) 981-1959

Thanks!
