

1. to emphasize robustness of MS-DOS 5 which is used all over the world while DR-DOS is not well accepted.
2. to tell them Industry has moved to Windows platform and DR cannot provide that platform.
3. to explain our upgrade/support strategy and invite them to see what and how we are doing to support users.
4. aggressively offer for upgrade to MS-DOS 5. (Academic version)
5. more marketing activity on MS-DOS 5 to increase customer awareness and satisfaction(This needs to be reviewed by marketing whether to spend more money on MS-DOS.)

If you have any good suggestions, please let me know.

Thank you,
Y.H.

Subject: DR Bug update
Date: Wed, Mar 4, 1992 3:04PM

My tests are done, and I've been up on compuserve. The new bugs that weren't in my original smear sheet are:

- * Norton Backup can't restore (doesn't work)
- * VDefend - the TSR from Central Point Anti-Virus - is incompatible
- * Certain machines have serious problems with floppy access time

The other bugs from the smear sheet have been fixed. Haven't had the IBM PC Lan bug retested yet.

It's not enough for smear sheet 2. I think we're back to where we were in the pre-DR DOS 6 days, which is perhaps we take one of these and leak it to spencer or cringely. Or, keep them in your hip pocket for your next press tour (stacker)

thanks
