Second feature: I have a Syquest drive. So far I haven't been
able to install DR6. It seems that DRDOS is trying to create a
directory in the Syquest drive. The Syquest drive returns
"Not ready error reading drive D" ARF.

I'll try removing the Syquest drive!

You must run from the dos prompt. If you try running it in a Windows
dos VM, you will get a message saying you can't run under windows. If
you try running directly from windows, screen just flashes.

Exit windows and run.

Bugmaster: Please enter the following bug:

Sev 3 - Fix for 5.0a

Getting Started section on problems running setup needs to tell
users to not run from windows.

Eric.

|
| screen flashes and it exits with no messages. tried reading trouble.txt
| but its too large for vi or notepad. tried setup /i and same thing.
| running under windows 3.0 on northgate 425i.

Windows Bug Report

Title:
Bambi:&DR DOS 6.0, many files turned into crosslinked mess
Opened By: lawren
Sev: 1
WinVer: 3.10 47
Product: Drivers
Area: Bambi
Origin: Internal
Sugg.Assign: scottq
DOSVer: 6.00
Mode: high
Name:.   Phone:

Problem Statement:
. Had run fine other times. Did a "DIR" and I got
  garbage characters. Chkdsk found well over 100 files
  with crosslinked files, invalid clusters, and invaild &
  incorrect lengths.

Machine Configuration:
  Cumulus 386 2M VGA

Config.Sys:

Autoexec.Bat:

Form #: SYS003   Version #: 2.00   Revision Date: 08/22/91

I believe we've settled the issue with jeanp regarding his vacation. Don't
call him. Kudos to bradsi for making this happen.

tee hee hee... thats what you get for running an incompatible OS

sorry, I couldn't resist. Scott, lets figure this out asap -- could
be a problem thats lurking for real DOS.

The new WzMail version (which uses the WinMail document
handling routines rather than the ancient DH library) also
gives you a huge perf boost. If you use WzMail you want it.
