| agreed before, we have to fix this!
|
| note that the problem with 'Title' being all squished
| up is not a truetype problem, it's due to the fact that
| we got rid of 'Helv'. ppl then goes for the first font
| on its list which is avantgarde, which is a very thin
| font indeed! it then does WYSIWYG by character placement
| which leads to the squishing effect
|

check this one out. don't know why sun needs the hct. it won't run
on their sparc machines.

|
| Jonathon Feiber in Mtn View is the other SUN site. He is listed
| as receiving the HCT.

| |
| |fine. then our license for apple and sun must specifically
| |say it's for use only by those groups. just as the system7
| |nda prohibited systems from looking at it.
