huh? Their player doesn't have the ability to stream, just locally file playback (technical fact).

BTW - where are you guys in development. Last we spoke you were basically done with your beta?

Real is touting Musicnet will launch in the next few weeks, I'd like to see us beat them to market

I'm not sure, they were asking us questions about what they would have to do to enable themselves to playback preesplay content. We told them we couldn't tell them. We did tell them that the v7.1 sdk is out and they should use that.

Their player only plays ASF files back locally, no streaming.

MusicMatch has is now using v7, not sure if its v7 or 7.1?

Hey John,

I see that the new RealONE player supports Microsoft DRM 7.x. Is it 7.0 or 7.1?
What's the status of other players supporting the 7.x DRMs?
