Understood, what is the solution? I don't want this detail to slow the process of getting the bigger MS/MN deal done. I believe that everyone in the room all agreed last week that we understood this issue and in order to move forward MusicNet was going to sign the agreement to to get the component and propose the technical solution.

Jeff, we have a bit of a problem over here -- I am talking with some folks to determine a workaround. You filled out the part of the agreement that said "what type of application are you building" you wrote something about an SDK. As you know our agreement doesn't allow you to write an SDK -- so if we countersigned we would be

3/15/2004

essentially saying – that this was OK.

We are trying to figure out what the best workaround is so you can evaluate the alternative.

John

I've not seen a response what is the status?

MusicNet engineering has been directed by the Microsoft Tech/Biz teams to evaluate and propose a solution back to the Microsoft Tech/Biz teams on how MusicNet can live by the agreement and still provide the same level of functionality as describe below.

Here you go.

The MusicNet Client SDK components encapsulate the functionality needed to access the MusicNet service and manage content licensing tasks. The Client SDK gives developers the tools to include the following functionality into their top-level applications for MusicNet service login and logout, account access, content downloading and streaming, content licensing and media player control.

Hello Mr. Wallace,

We just received your license agreement. Thank you.

Please describe your product 'MusicNet SDK' in more detail so that our counter signer understands what it does.

Once we've received an appropriate description we will attach it to the license agreement and submit it for further processing.

We look forward to your reply.

Best regards,
Windows Media Licensing Department

John,

I sent the signed agreement to the wmla group and they should have received it yesterday AM. Can you please check to see that they received it? I'd like to confirm our technical solution ASAP.
