Subject: RE: EMC Java management app & Whistler VM. Issue?

Al, my "definitive" source on the fact that we were not shipping our JVM in Whistler was Kevin Miller.

Kevin, will you confirm that the plan of record remains that the MS JVM will NOT ship in Whistler post Beta 2 and that customers that want it will need to download it from the web?

Al, I keep this distribution small until we have the for sure answer, then we need to get it to all on your original TO: and CC: line.

The VM will install on demand the first time it is called.

This would seem to be in John's alley...

Subject: EMC Java management app & Whistler VM. Issue?

So, since I understand that we are not shipping a Java VM in Whistler, and
EMC's management tool is in Java and needs a VM to run, how are they
going to run their management tools on Whistler based computers? Who
should this question really be addressed to in MS?

Stawsh, sitting next to me, says that they will need to buy a VM from one of
the three existing VM vendors.

IBM
Tower Systems
Appeal(Jrockit VM)

So, is that the answer we want to be giving every ISV in the world? Seems
odd.

Al
