Hi all !

I have a problem i thought you might know the answer to. I Installed Windows
Xp today, and when i tried to get in to Yahoo Games i got a msg asking if i
agreed to download Virtual Machine to show the site.. which i did. But then
a website at Microsoft poped up saying that this was no longer available for
Xp. And i cant find any older versions or versions for win98, win95 or
win2000...

Any idea what i can do to make this work ?!

Regards, Therese.
