Business as usual aint good enough. We've got to absolutely jump on this stuff. It cant wait even a couple of hours let alone half a day. I want you to make this your number one priority. This beta release is critical to the success of via 3.1. I need 100% of you and did not see that yesterday. If you have a problem with this, please come and see me.

Sorry I wasn't able to get these things done this evening -- I had a prior commitment.

- 1) pwb/sd problem -- I didn't hear back from karist in time to get back over there today.
- 2) ms-dos detection code change -- Aaronk already came by my office with a new object module which we checked in. I did *NOT* rev the version number yet. Is this supposed to go into the beta? I'd assumed that it was not, since he didn't say anything about contacting ricken, etc., about getting it included.
- 3) desqview problem -- I didn't hear about this one in time to address it today either. It sounds like an easily repeatable failure which may make it quick to track down.

I will try to be in the office by 9 am tomorrow to address these issues. I still haven't completed my benchmarks and acceptance tests for the bug fix I made earlier today, either.
