This material was used by McKinsey & Company during an oral presentation; it is not a complete record of the discussion.

McKinsey & Company

**C1) Address UI gap between Android and iPhone**

Navigation	Browser
	
<p><b>More intuitive and faster to use on iPhone</b></p> <ul style="list-style-type: none"><li>▪ Preferred applications always visible</li><li>▪ Number of unread messages visible next to application icon</li><li>▪ Applications visible in homescreen, no separate application menu</li></ul>	<p><b>Better browser experience on iPhone</b></p> <ul style="list-style-type: none"><li>▪ Pinch to zoom in browser allows more intuitive and easier browsing</li><li>▪ Copy/paste functionality, e.g. copy option is automatically triggered when user selects an area, whereas in Android users have to go to submenu</li></ul>
<p><i>"lack of user-oriented elegance. The Android UI is not terrible, but it clearly has not received the care and attention it deserves" – Computer World (IDG)</i></p> <p><i>"...called the Droid's interface less intuitive than that of the iPhone" – WSJ</i></p>
